DAY 56–60 · Part 6 · What Comes Next

Part 6 Review — What Comes Next

From the AGI debate to the order of learning · short, with analogies · DAY 56-60

No test — a review to read through

Whether AGI is here is a fight about the bar

1. AGI is the name for an AI that's broadly as good as a person. But nobody has settled how much it has to do to earn that name.

2. Set the bar low and today's AI already passes; **set it high and it falls short**. Same AI, different answer.

3. So when someone says 'AGI is here,' there's one thing to ask first — what's your bar?

What disappears isn't the job, it's pieces

1. One job is made of several pieces: gather, make, choose, own it.

2. AI grabbed the first two pieces fast, and **the pieces where you decide what's right and answer for it stay with people**.

3. So whole jobs don't vanish. The center of gravity slides toward the back.

Safety isn't a personality, it's guards bolted on

1. AI safety isn't magic that makes a model good. It's guards you add on top of the model, one at a time.

2. There are three of them — **refusing, asking before acting, and checking afterward**.

3. Adding them really does change behavior, but it isn't free. It takes more computing, and fine requests get turned down more often.

AI went into the robot's first three pieces

1. Robots look smart these days, but not because their bodies got better. The same kind of AI we use got plugged into the brain spot.

2. AI went into the eyes, the ears for instructions and the judging, while **the pieces that move hands and legs are still mechanical engineering**.

3. So the truly hard part isn't the thinking, it's the body. Balance has to be caught hundreds to thousands of times a second.

What you need isn't new knowledge, it's an order

1. Across all 60 days one answer kept coming back — ask, check, try it yourself, then explain it in your own words.

2. Tools change every few months, but **the way you learn doesn't**. That's why the order you pick up today still works next year.

3. Getting stuck isn't failure, it's one step of the order. Asking again about the stuck part is the next step.

Questions about what comes next are mostly questions about us.

From next week: one lesson a week on this week in AI.
